

DECODING THE TEEN YEARS

HIGH SCHOOL

Audrey, Ella, Lexie, Evan

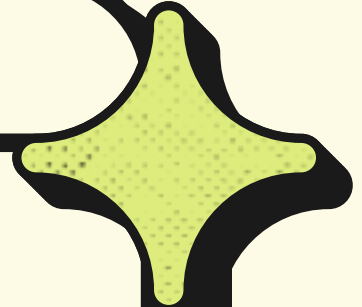

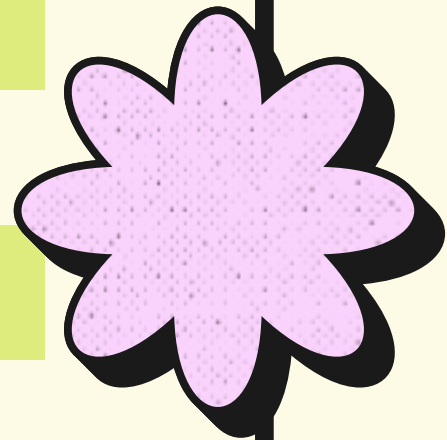

OBJECTIVES!

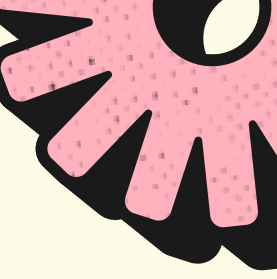

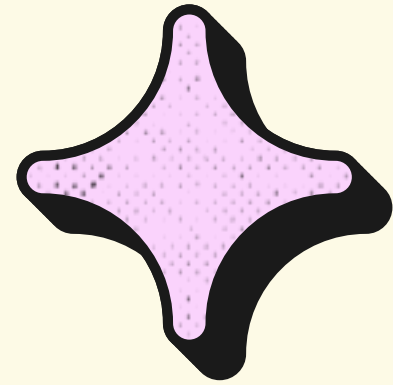

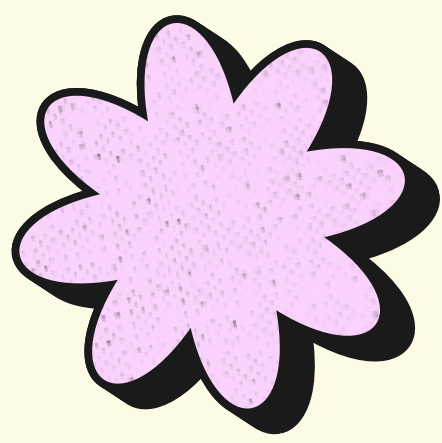

- 🌻 **Promote understanding of the importance of developmental models for parents**
- 🌻 **Discuss domains of development in teenagers**
- 🌻 **Describe effective parenting styles for adolescents**
- 🌻 **Discuss sexual behavior and risk taking**

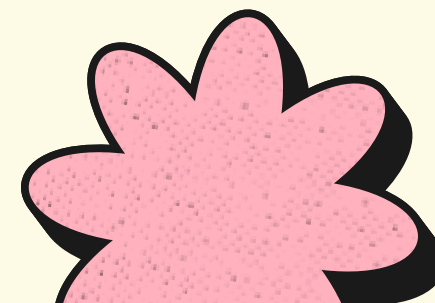

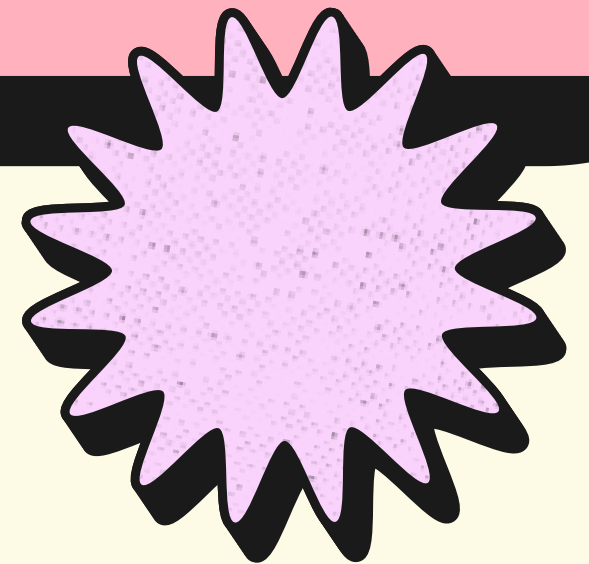

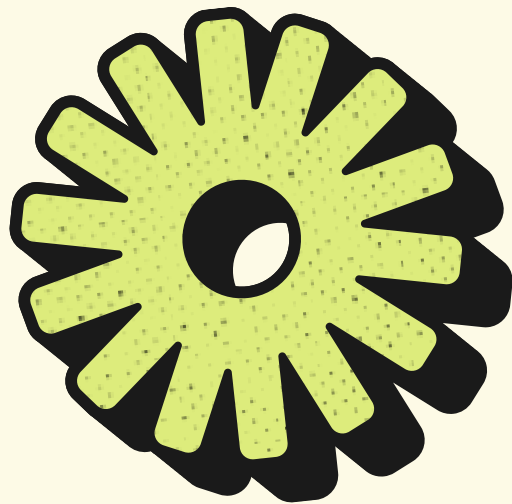

Remember High School?

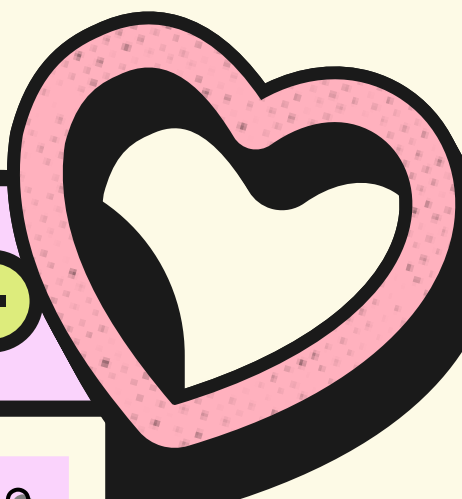

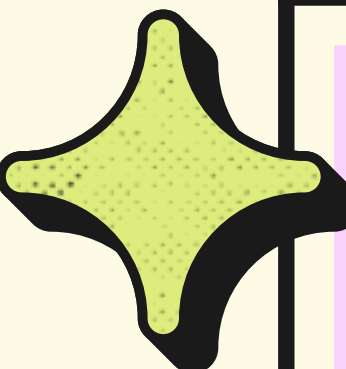

**WE WANT YOUR
PERSPECTIVE!**

LET'S TALK ERIKSON!

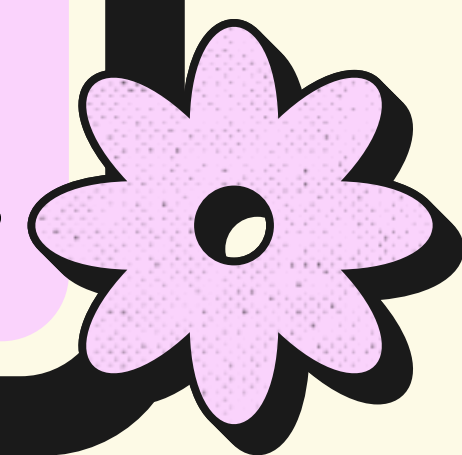

ALL ABOUT ERIKSON & DEVELOPMENTAL MODELS!

Who was Erikson and What is His Theory?

- ☀ Erik Erikson was a developmental psychologist who believed that people grow through a series of emotional and social stages from infancy through old age.
- ☀ Each stage has a core challenge (like trust, independence, or identity) that children must work through to build healthy skills for the future.
- ☀ Erikson emphasized relationships, showing how parents, caregivers, teachers, and peers play a major role in shaping a child's emotional development.

Why are Developmental Theories Important for Parents to Understand?

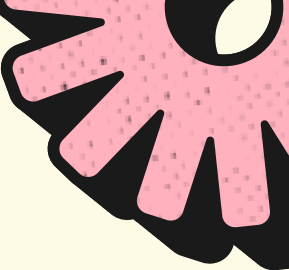

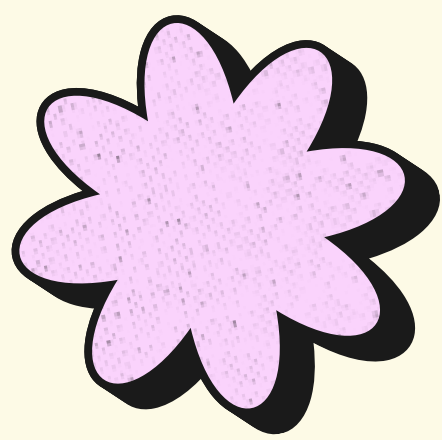

- ☀ They help you know what's developmentally normal, which makes your children's behaviors feel more understandable and less stressful.
 - ☀ They guide realistic expectations, so you can match your support to what your kids are actually ready for at each age.
 - ☀ They support healthier parenting, helping you respond in ways that build confidence, emotional skills, and resilience over time.
- 

Erikson's Psychosocial Stages Summary Chart

Stage	Basic Conflict	Important Events	Key Questions to be answered	Outcome
Infancy (0 to 18 months)	Trust vs. Mistrust	Feeding/ Comfort	Is my world safe?	Children develop a sense of trust when caregivers provide reliability, care and affection. A lack of this will lead to mistrust.
Early Childhood (2 to 3)	Autonomy vs. Shame and Doubt	Toilet Training/ Dressing	Can I do things by myself or need I always rely on others?	Children need to develop a sense of personal control over physical skills and a sense of independence. Success leads to feeling of autonomy, failure results in feelings of shame and doubt.
Preschool (3 to 5)	Initiative vs. Guilt	Exploration/ Play	Am I good or bad?	Children need to begin asserting control and power over the environment. Success in this state leads to a sense of purpose. Children who try to exert too much power experience disapproval, resulting in a sense of guilt.
School Age (6 to 11)	Industry vs. Inferiority	School/ Activities	How can I be good?	Children need to cope with new social and academic demands. Success leads to a sense of competence, while failure results in feeling of inferiority.
Adolescence (12 to 18)	Identity vs. Role Confusion	Social Relationships/ Identity	Who am I and where am I going?	Teens need to develop a sense of self and personal identity. Success leads to an ability to stay true to yourself, while failure leads to role confusion and a weak sense of self.
Young Adult (19 to 40)	Intimacy vs. Isolation	Intimate Relationships	Am I loved and wanted?	Young adults need to form intimate, loving relationships with other people. Success leads to strong relationships, while failure results in loneliness and isolation.
Middle Adulthood (40 to 65)	Generativity vs. Stagnation	Work and Parenthood	Will I provide something of real value?	Adults need to create or nurture things that will outlast them, often by having children or creating a positive change that benefits other people. Success leads to feelings of usefulness and accomplishment, while failure results in shallow involvement in the world.
Maturity (65 to death)	Ego Identity vs. Despair	Reflection on life	Have I lived a full life?	Older adults need to look back on life and feel a sense of fulfillment. Success at this state leads to a feeling of wisdom, while failure results in regret, bitterness, and despair.

EMOTIONAL MILESTONES

- Big question – Who am I?
- Experimentation is pivotal at this stage
 - Friendships
 - Self-expression
 - Beliefs and values
- Push for independence and autonomy
- Self-esteem can change drastically during this time as a result of emphasis on appearance and peer/media influences
 - Peer acceptance is very impactful on teenage self-esteem

(Lang et al., 2022)

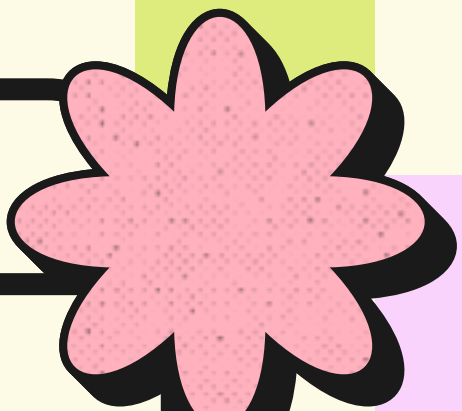

EMOTIONAL DEVELOPMENT

- Adolescents are more emotionally reactive than both children and adults
 - Emotions more intense and harder to control
 - Learning better coping skills for stress and conflict
- Risk for development of depression
 - Depression rates higher in girls
 - 1/3 of teens experience “depressed mood”
 - Signs to watch out for:
 - Loss of interest in hobbies/friends
 - Lack of concentration
 - Feelings of worthlessness

(BRODERICK & BLEWITT, 2020)

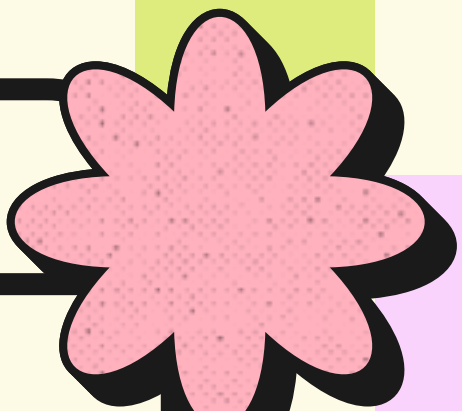

BRAIN DEVELOPMENT

- Decision Making tends to be more immature than adults
 - Formal reasoning is used 30% in younger teens (about 13 years old) 60% of older adolescents (college students) do so (Broderick, 2020).
 - Cross cultural studies suggest that access to education emphasizing critical thinking increases the likelihood that an individual will use formal reasoning (Broderick, 2020).
 - Heightened sensitivity to rewards, the ventral striatum has been linked to substance use and sex (Broderick, 2020).
 - The brain development is uneven amygdala, hippocampus, etc. (Broderick, 2020).
- 

SEXUAL RISK TAKING

- The CDC states that Among U.S. **high school students** surveyed in 2023:
- **32%** had ever had sexual intercourse.
- **48%** did **not** use a condom the last time they had sex.
- **9%** had been physically forced to have sexual intercourse when they did not want to.
- **7%** of all students have ever been tested for HIV.
- **6%** of all students have been tested for sexually transmitted diseases during the past year.
- **Source:** National Youth Risk Behavior Survey, 2023 (CDC)
- Why adolescents take sexual risk: youths' sexual risk taking can also be considered within the broader, more distal contexts, such as neighborhoods, in which adolescent development occurs, contexts that become increasingly important during this period of the life course. In disadvantaged (i.e., socioeconomically impoverished) neighborhoods, youths have sex earlier, have more partners, and use contraceptives less often than peers in more advantaged neighborhoods(University of Nebraska-Lincoln).

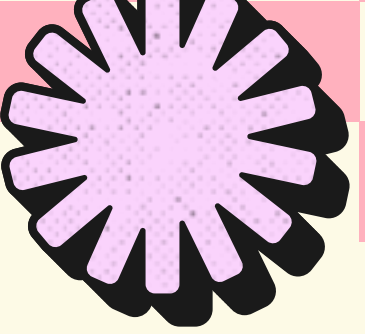

SELMAN'S STAGES OF FRIENDSHIP

STAGE 3 MUTUAL/RECIPROCAL

- Less egocentric
- Mutual support
- Mutual responsibility - no more "keeping score"
- Mutual trust
- Value having similar interests and viewpoints - may be a betrayal if these differ

STAGE 4 MATURE/IN-DEPTH

- High value on emotional closeness
- Trust and support
- Understanding of relativity
- Appreciates differences
- Not as possessive of friendships - room for many

POSSIBLE BEHAVIORS AND YOUR ROLE

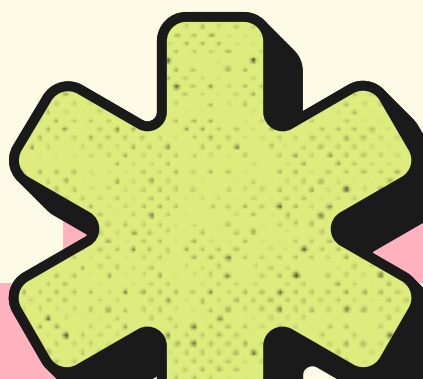

BEHAVIORS

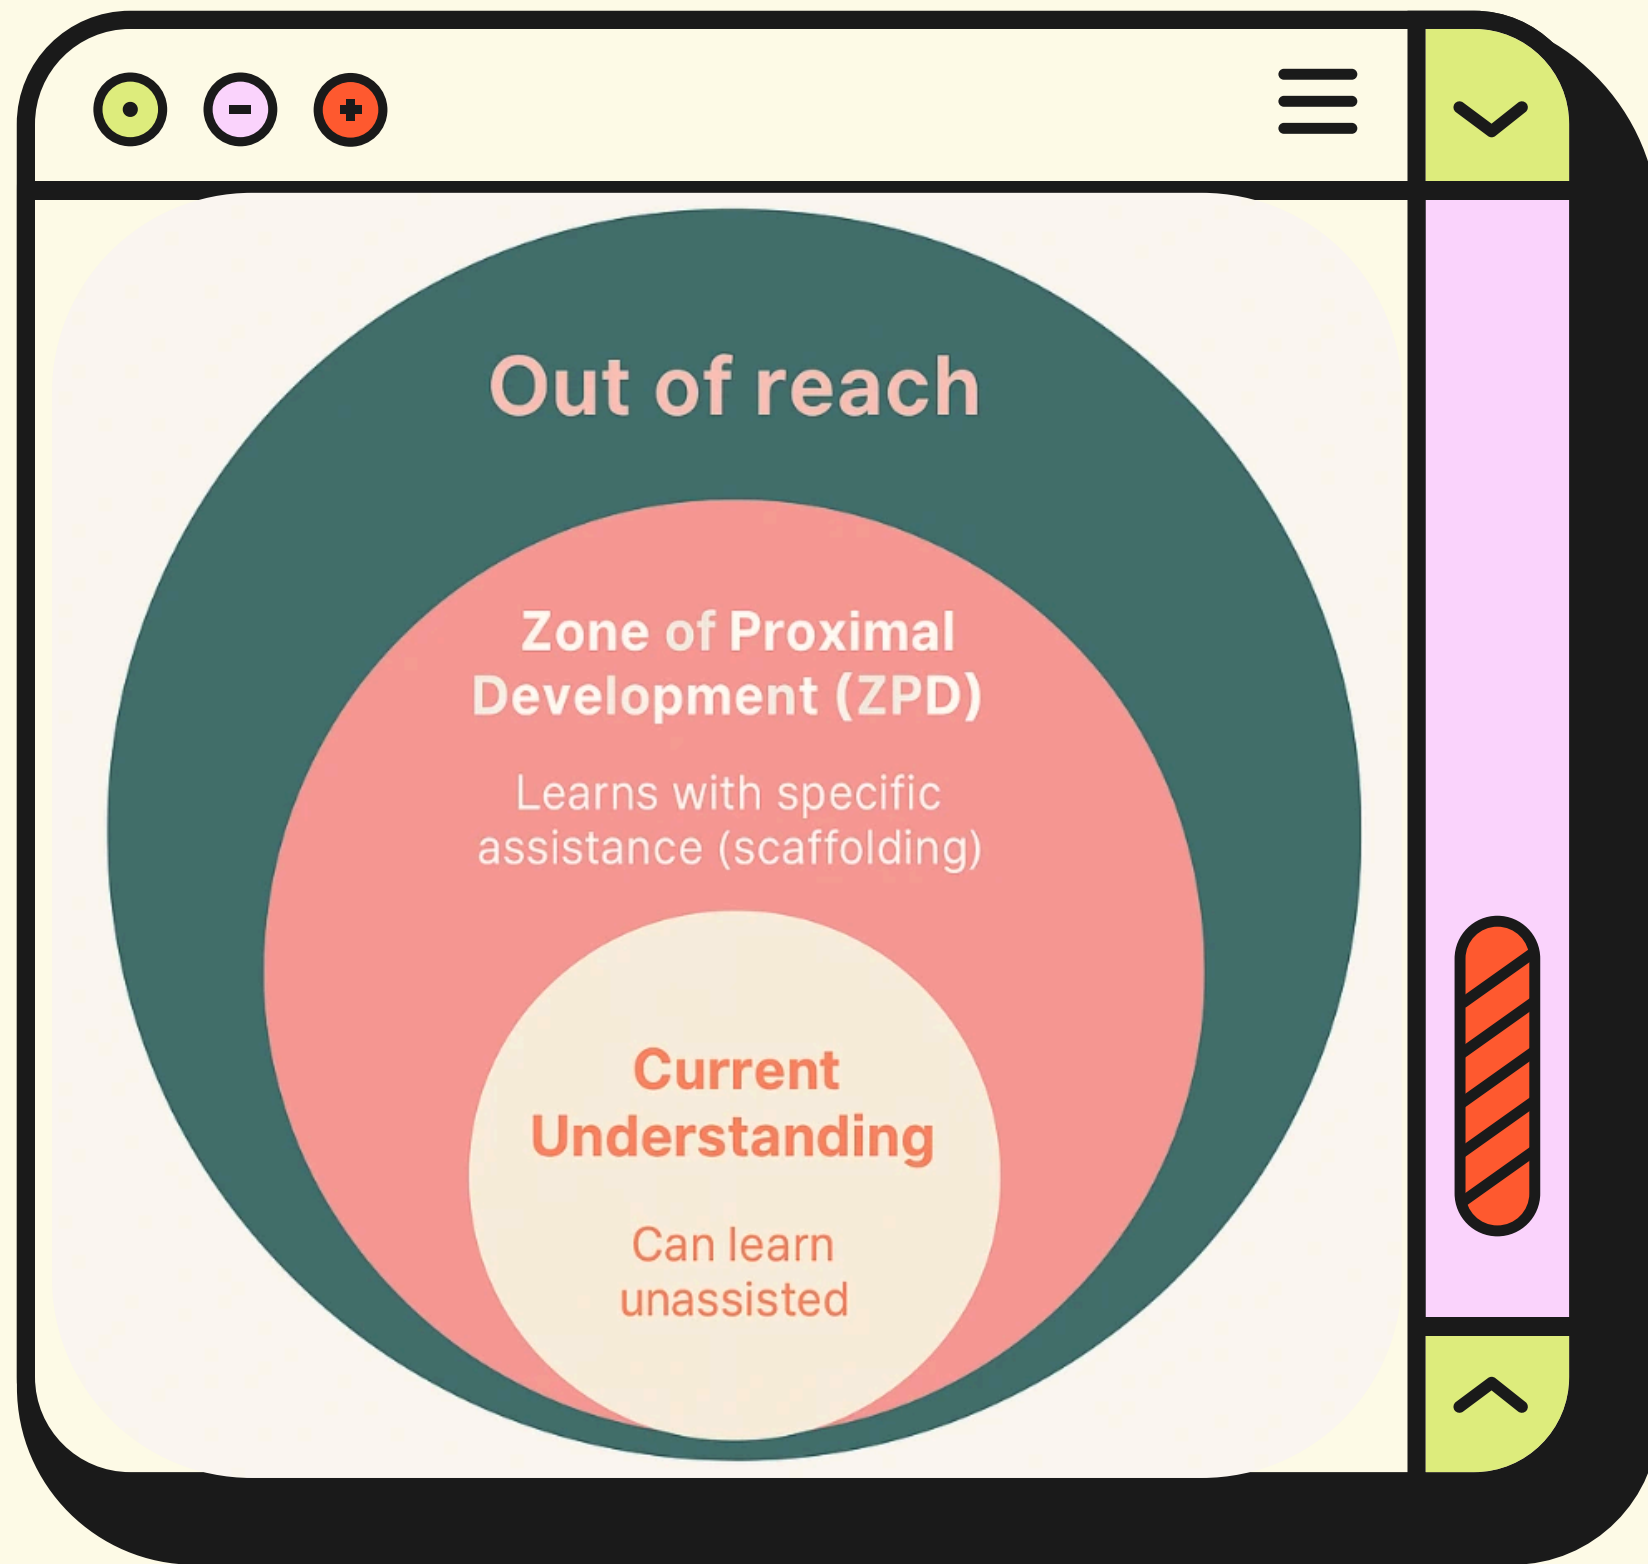

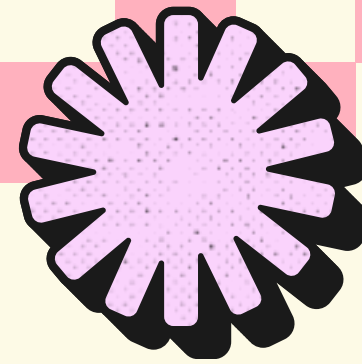

- Teens begin to pull away from parents and gravitate towards peers
- May struggle with development of perspective-taking
- May take friendship conflicts very hard - feelings of betrayal common

CAREGIVER ROLE

- Listen and validate
- Model healthy friendships and effective conflict resolution
- Encourage and model healthy boundaries
- Practice perspective taking

(Mak et al., 2023)

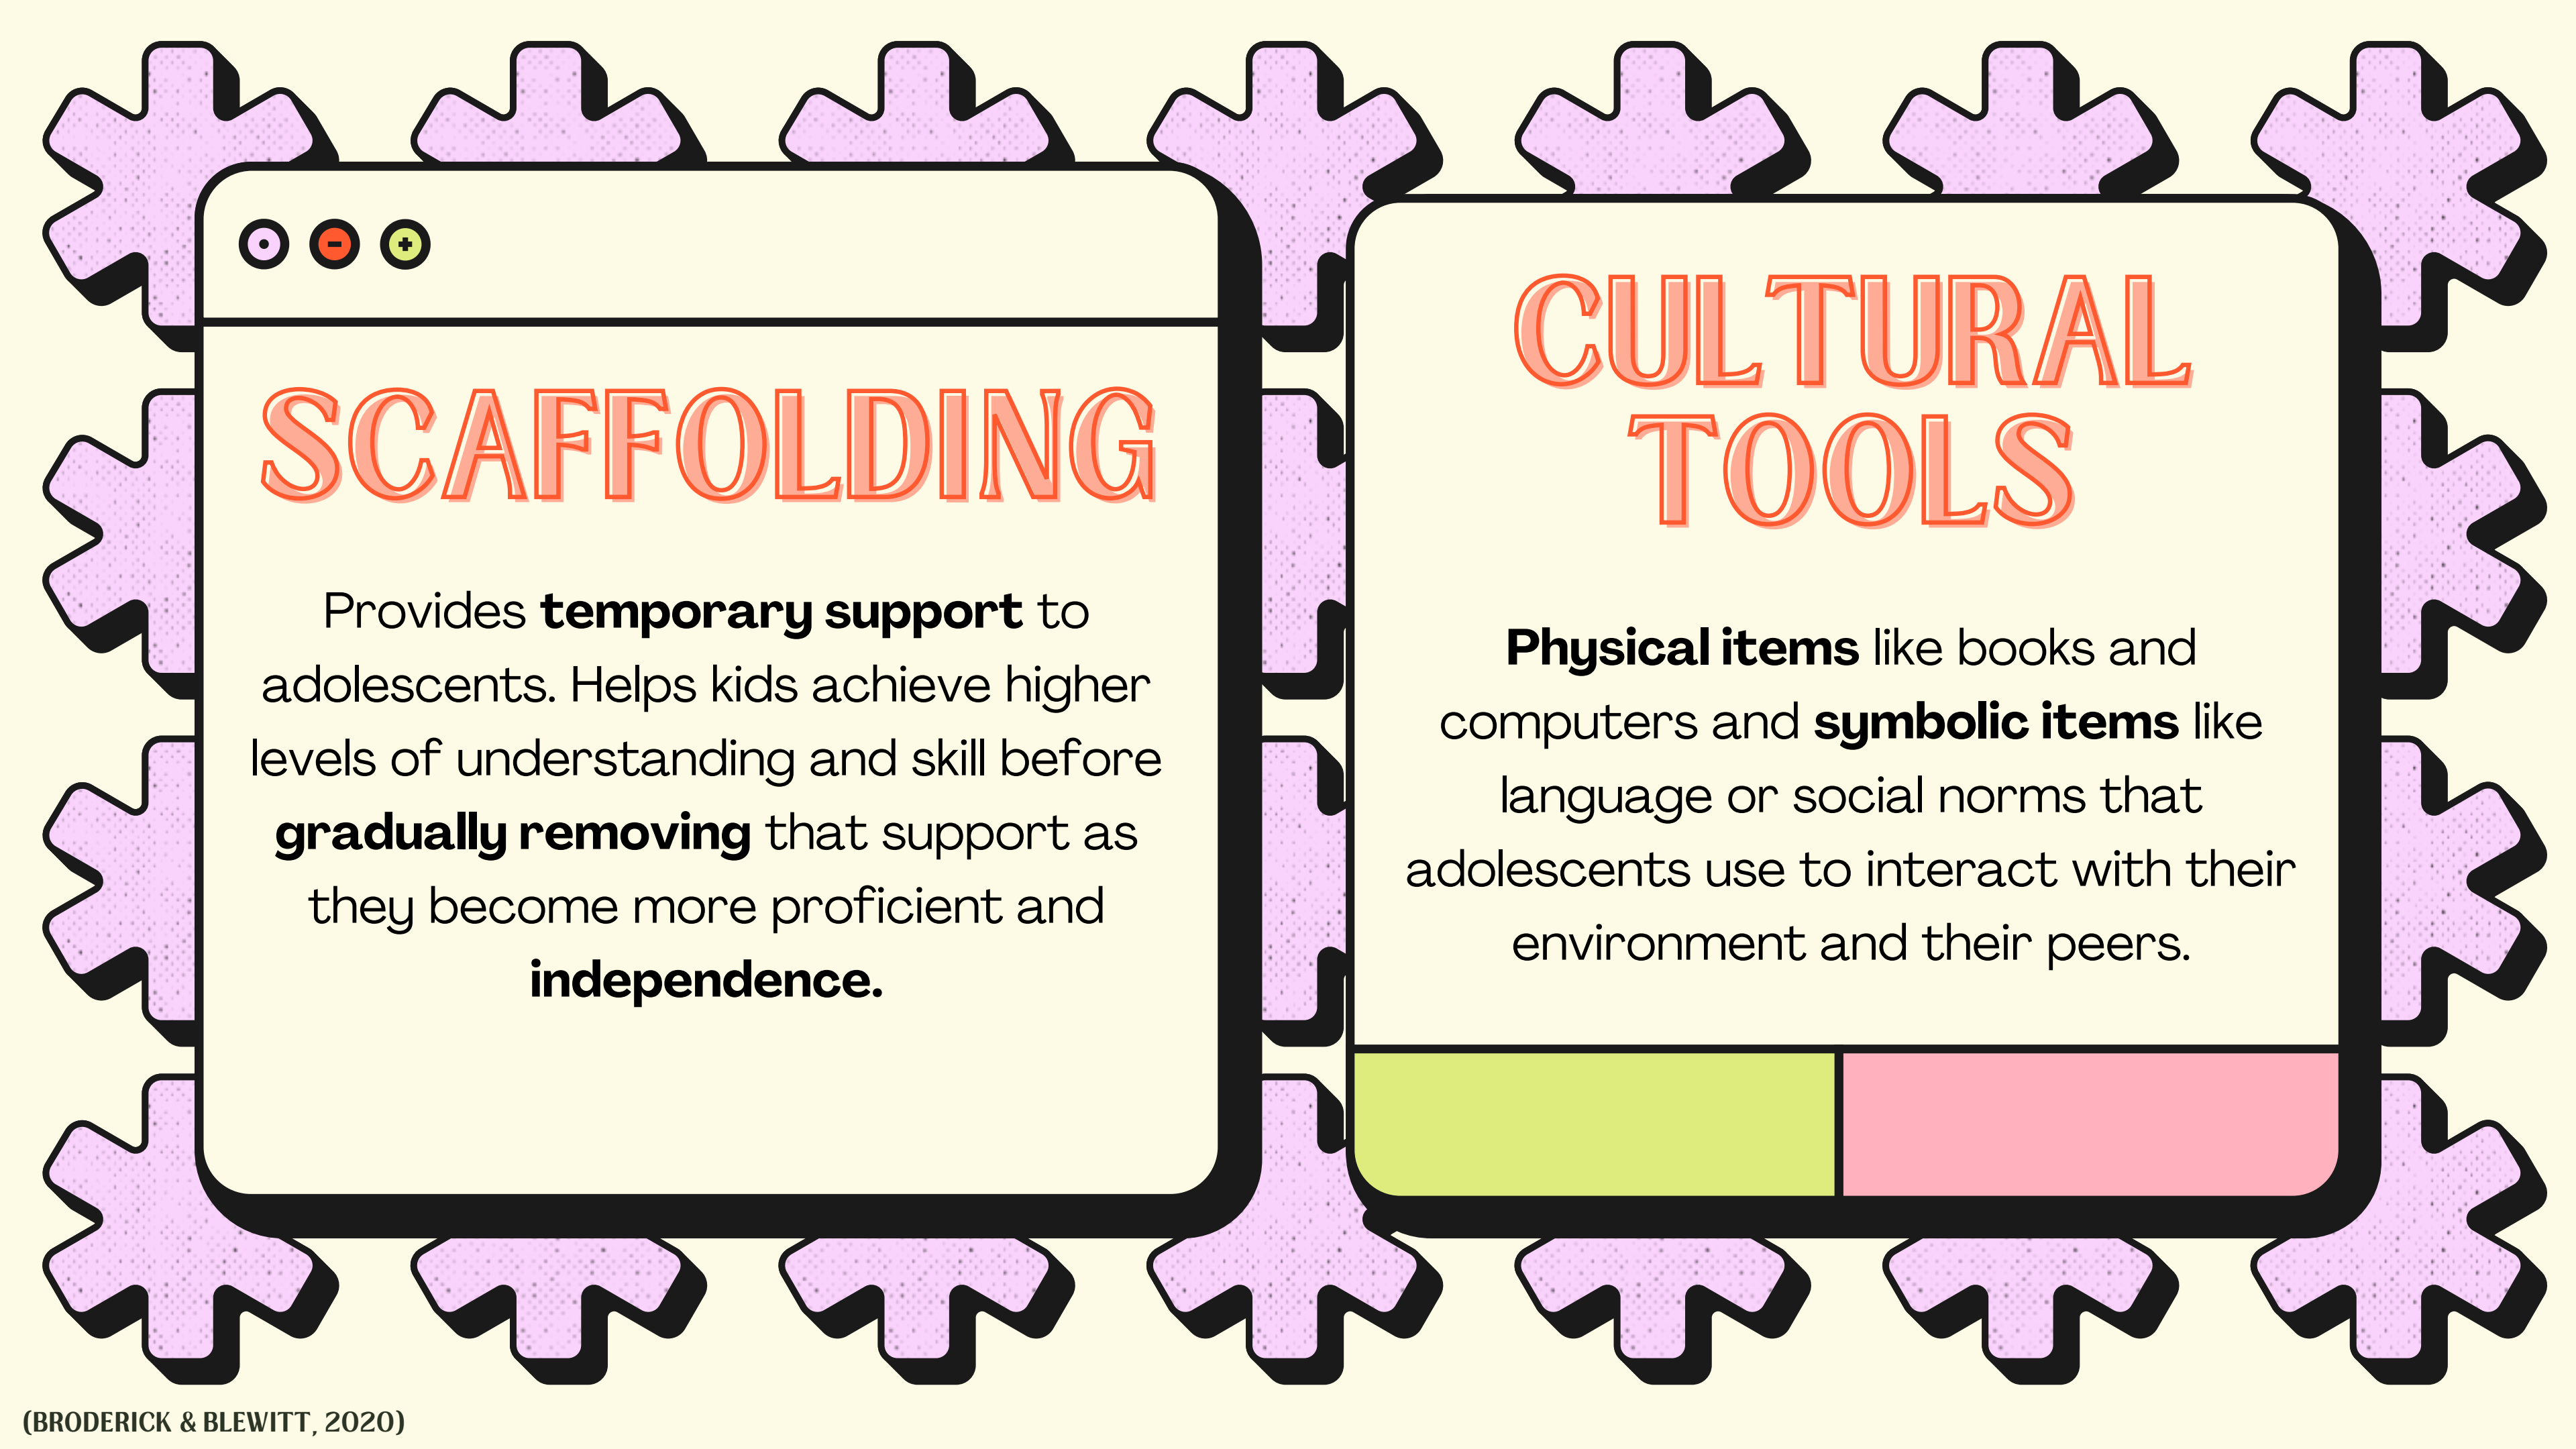

VYGOTSKY'S ZONE OF PROXIMAL DEVELOPMENT

(BRODERICK & BLEWITT, 2020)

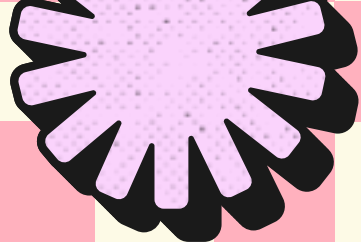

SCAFFOLDING

Provides **temporary support** to adolescents. Helps kids achieve higher levels of understanding and skill before **gradually removing** that support as they become more proficient and **independence**.

CULTURAL TOOLS

Physical items like books and computers and **symbolic items** like language or social norms that adolescents use to interact with their environment and their peers.

PARENTING STYLES: DO'S AND DON'TS

PARENTAL WARMTH OR RESPONSIVENESS

-  **DO** take your child's thoughts, feelings, and wants seriously
-  **DON'T** belittle and ignore what they express to you
-  **DO** explain your actions and why you enforce rules like screen time or curfew
-  **DON'T** tell them "because I said so" or "because I'm the parent"

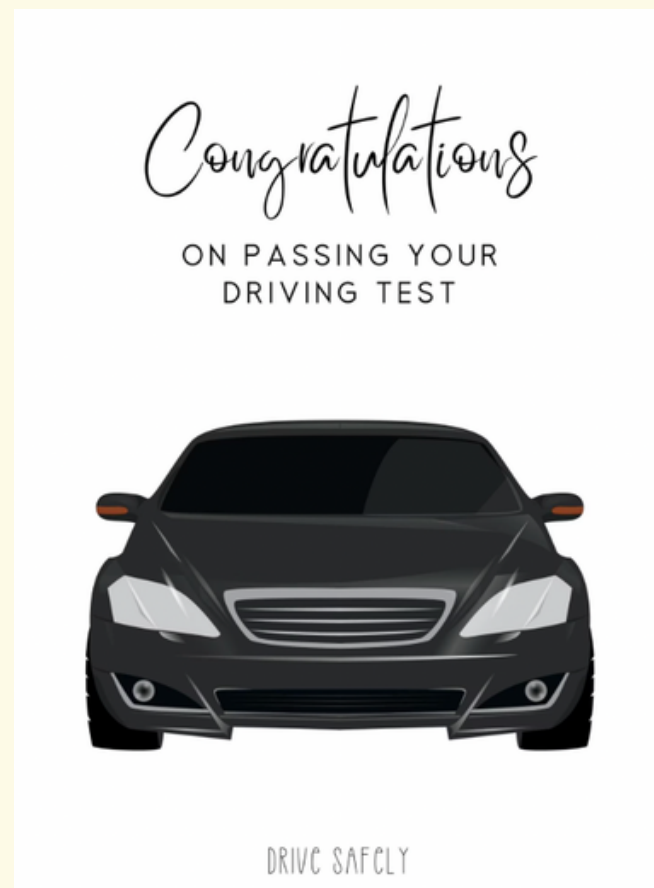

PARENTAL CONTROL OR DEMANDINGNESS

-  **DO** ask for your child's opinion and encourage forms of self expression
-  **DON'T** ignore their autonomy and individuality
-  **DO** provide consistent consequences for misbehavior
-  **DON'T** enforce seemingly random punishments for misbehavior

(BRODERICK & BLEWITT, 2020)

CULTURAL EVENTS AND IMPORTANT MILESTONES

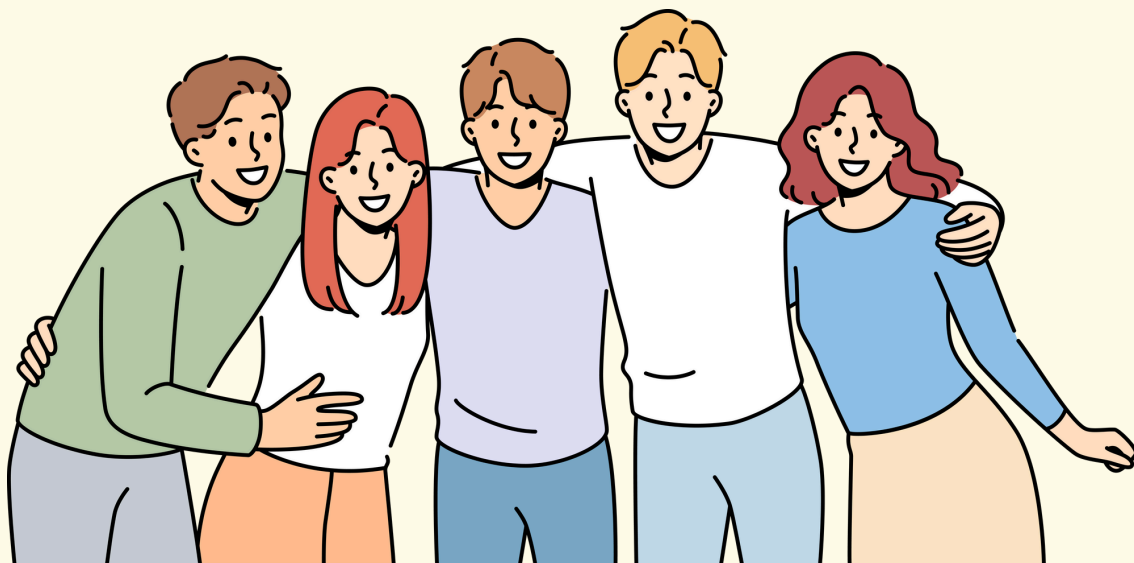

GENDER

UNIVERSAL:

All teenagers experience bodily changes due to puberty and face societal pressures

INDIVIDUAL:

Gender norms
Emotions/vulnerability
Emphasis on appearance

UNIVERSALITY VS INDIVIDUALITY

RACE/ETHNICITY

UNIVERSAL:

All teenagers are working to form their own identity and find groups where they feel a sense of belonging

INDIVIDUAL:

Stereotypes
Discrimination
Cultural values
Community

RELIGION

UNIVERSAL:

Teenagers begin exploring their own belief systems and values in their development of independence

INDIVIDUAL:

Stress if beliefs differ from family members
Community
Discrimination

THE IMPORTANCE OF SLEEP

- Teens need 8–10 hours of sleep per night
- Sleep deprivation can impact emotional regulation, executive function tests, and learning skills
- Effects of puberty on sleep and hormones
- Delayed phase preference
- Most important tool – sleep regularity

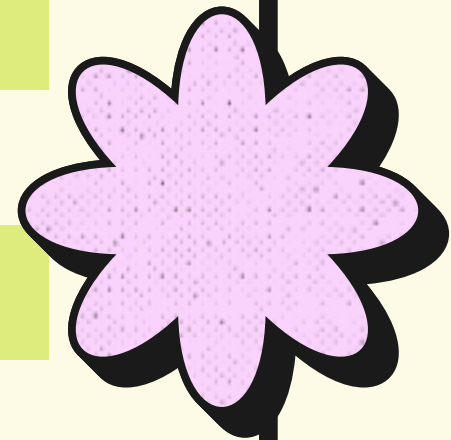

TABLE 9.2 Teen Sleep Recommendations for Parents

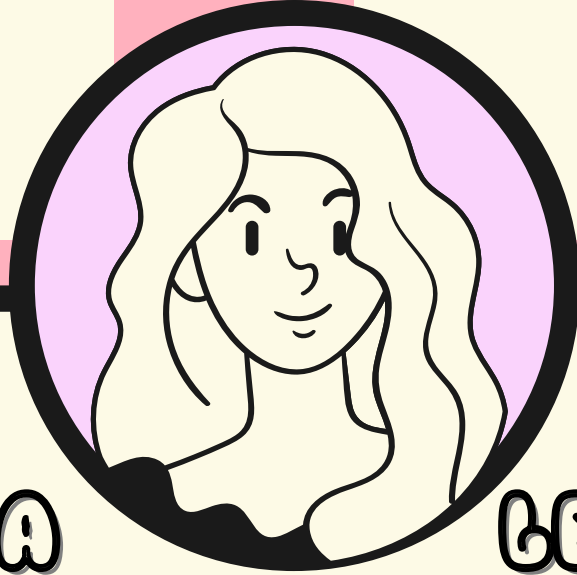

- Set bedtimes for 10:00 p.m. or earlier.
(If the schedule is regular, teens will fall asleep as easily as they do at later times.)
- Restrict technology use before bedtime and in the bedroom.
- Limit caffeine and energy drinks, especially in the evening.
- Keep sleep schedules consistent.
- Consider advocating for later school start times.
