

Type of Intervention: Class

Domain: Career

Student/Adult Name (if applicable): N/A

Number of Students (if applicable): 20

Grade of student(s) being worked with or discussed: 2nd grade co-taught class

What was the reason for the intervention?

This was a lesson prepared by the county on career exploration for 2nd grade.

Provide a brief summary of the intervention:

The students did a zones check-in, where each of the 4 zones (blue, green, yellow, red) was discussed, and students gave a thumbs up for the zone in which they were showing up today. The lesson then began with each student receiving a pencil and a sticky note. They were asked to write on the sticky note what skills they think they possess (one or many). They then wrote any careers that they thought those skills would help them to be proficient at in the future. Students were then allowed to share the skills and careers they had written down with the class. I then went over a few skills that are typically needed in all careers to demonstrate some skills that the students may not have originally thought of (teamwork, time management, self-regulation, etc.). A 6-minute video was shown where multiple clues were given before students guessed what career they thought the person being described held. After the video, we discussed as a class any careers that stood out to students, and what additional skills they thought the individual would need to be good at that career. Students were then given blank sheets of paper and told to draw themselves in the career they had listed at the beginning of the lesson. Students were asked to include a picture of themselves in the uniform that is customary for that job, as well as to include the background details (setting, tools, additional people, etc.). Students then spent time coloring and decorating their pictures before taking them home.

Describe what went well:

Students were very engaged in the sticky note activity and were excited to both write down their skills/careers and to share them with the class. Students who could not initially think of skills or careers were assisted in brainstorming what they were good at and what this could translate to in the working world. Students were also very engaged in drawing themselves in the careers they chose. Some of the students were excited to link the skills they believe they have (gaming, YouTube) to future careers (streamer, YouTuber, etc.).

Describe what you would like to work on after reflecting on this intervention:

I would have liked to have had more time to prepare the lesson and to add more details to it to make it more personalized. I would also like to work on classroom management during activities, especially during a co-taught class when attention and behaviors can sometimes be an issue. This classroom lesson had some disruptions and distractions, with some students who were not as engaged in the activities and lesson content. I would love to find additional ways to keep them engaged with the rest of the class.

What is your plan for follow up with the student(s), family member, or staff member?

I would like to continue to work on career exploration with students and ensure that students are exposed to different role models/information to help them explore. I would also like to discuss with the co-taught teachers various methods that they have for keeping the class engaged throughout lessons for the future.
